

Approving BPL is a avery ill-advised decision. Obviously, Chairman Powell and the Commission are ignoring the results of BPL field-testing in Austria, which resulted in a ban on BPL there.

In my opinion, it is time to stop padding the pockets of Big Business at the expense of others, one of which is the Amateur Radio community. BPL would create levels of interference which would make reception for Ham operators impossible in many areas.

I urge you to rethink and overturn this hasty and ill-conceived decision.
